

**Objective:** To explore various AutoEDA capabilities and perform analysis on a given dataset

This notebook will focus on DataPrep

## 2. AutoEDA - DataPrep

**Dataset Reference:** Loan Prediction dataset from Kaggle

**Features:**

- General Overview - Quick insights of all variables in the dataset using the plot dataframe.
- Details about each variables / features in the dataset by using create\_report - overview, variables, interactions, correlations, missing values
- Interactions - based on x-axis and y-axis scatter plots
- Correlations between variables - Pearson's Correlation Coefficient, Spearman's Rank Correlation Coefficient, Kendall's Rank Correlation Coefficient
- Missing Values - Bar chart, Spectrum, Heatmap, Dendogram representations
- We can pick one particular feature and analyze - Stats, Bar chart, Pie chart, Word Count, Word Frequency etc as per applicability

**When To Use?**

- Dataset size is fairly very large (this seems to be 10X faster than Pandas Profiling tools due to it's highly optimized Dask-based computing module)
- Need some quick insights about an unknown dataset
- Use this as a basis for your further EDA analysis on top of it

```
In [1]: import pandas as pd

df_train = pd.read_csv("../input/loan-eligible-dataset/loan-train.csv")

df_train.head()
```

```
Out[1]:
```
